

Technical Data Sheet

Dräger PARAT 5500 Fire Escape Hood

1.0 General Data		
1.1	Manufacturer	Dräger Safety AG & Co. KGaA, Revalstraße 1, D – 23560 Lübeck, Germany
1.2	Designation & Dräger part no.	1. PARAT 5510, Single pack R 59 415 (GTIN: 4026056008049) 2. PARAT 5520, Soft Pack R 59 425 (GTIN: 4026056008056) 3. PARAT 5530, Hard Case R 59 435 (GTIN: 4026056008063)
1.3	Intended use	Fire escape / respiratory protection (incl. eye protection) against carbon monoxide, fire related gases, toxic particles and smoke. For single use.
1.4	Useage Duration	At least 15 minutes in order for the user to escape to a safe area.
1.5	Certification	EN 403:2004(M) EC type test certificate, granted by accredited and notified Certification Body DEKRA EXAM GmbH, Dinnendahlstraße 9, 44809, Bochum, Germany
1.6	Further relevant standards	Environmental simulations (IP- protection category test) acc. to EN 60529 Soft Pack: IP 5X Hard Case: IP 54 Additionally tested against H ₂ S according to DIN 58647-7:1997
1.7	Export approval	No classification → no sales restrictions

2.0 Design & Construction (complete device)												
2.1	Design & material	<p>The PARAT 5500 consists of:</p> <ol style="list-style-type: none">1. hood with large visor2. inner half-mask (integrated in hood) with filter assembly3. fire escape filter CO-P24. different packaging options (Single Pack, Soft Pack, Hard Case)										
2.1.1	Hood	<p>The hood fits different sizes. The at one-side PU coated material has got the signal-colour neon yellow. The neck collar, made of polyester and elastane, seals at the neck. The large visor enables a wide field of view.</p> <table><tr><td>Hood material</td><td>polyamide 6.6 with polyurethane coating</td></tr><tr><td>Visor</td><td>cellulose propionate</td></tr><tr><td>Neck collar</td><td>polyester and elastane</td></tr><tr><td>Straps</td><td>polyamide 6.6 and elastane</td></tr><tr><td>Exhalation valve</td><td>silicone (age-resistant)</td></tr></table>	Hood material	polyamide 6.6 with polyurethane coating	Visor	cellulose propionate	Neck collar	polyester and elastane	Straps	polyamide 6.6 and elastane	Exhalation valve	silicone (age-resistant)
Hood material	polyamide 6.6 with polyurethane coating											
Visor	cellulose propionate											
Neck collar	polyester and elastane											
Straps	polyamide 6.6 and elastane											
Exhalation valve	silicone (age-resistant)											
2.1.2	Inner half mask	<p>The telescope-mechanism of the inner-half mask allows the hood to be packaged in a space-saving manner. It is very comfortable to wear and ensures a good fit for different head sizes and shapes.</p> <table><tr><td>Half-mask</td><td>ethylene propylene diene M-class rubber</td></tr></table>	Half-mask	ethylene propylene diene M-class rubber								
Half-mask	ethylene propylene diene M-class rubber											

Technical Data Sheet

Dräger PARAT 5500 Fire Escape Hood

2.1.3 Filter	<p>The filter housing has a round shape and consists of the filter pot and the filter cover. The filter cover has a round inlet opening, the filter pot has a round outlet opening.</p> <p>The filter bed consists of hopcalite. It is fixed by the housing and internal sieves.</p> <p>The particle filter with ring fold geometry is positioned in front of the gas filtration part and is made of one part. A tight connection between the particle filter and the housing is performed by butyl glue.</p> <p>Both openings are closed by plugs, which will detach automatically (except of the Single Pack) when the escape hood is removed through the pull string.</p> <p>Pull string (Soft Pack, Hard Case) polyurethane</p> <p>Pull string (Single Pack) cotton/ polyurethane/ stainless steel</p>
2.2 Working principle	<p>Fire-related gases and vapours, especially carbon monoxide (CO) are converted from the ambient air by the carbon catalyser (hopcalite) into CO₂ and heat. Particles are filtered by the glass fibre filter.</p> <p>The hood protects the entire head, including the eyes up to a certain extent from dust, gases, vapours, and splashes of liquid chemicals as well as heat, sparks and flames.</p> <p>It enables a clear view through the large visor.</p>
2.3 Service life	<p>16 years in total, provided the filter is exchanged after 8 years</p> <p>The filter exchange is easy to be done, so the filter can be exchanged by trained personnel.</p>
3.0 Performance Data (minimum data in accordance with EN 403:2004 / DIN 58647-7:1997)	

Technical Data Sheet

Dräger PARAT 5500 Fire Escape Hood

3.1	Mechanical resistance	<u>Shock proofed</u> 10,000 impacts for entire device <u>Drop test</u> 6 x 1.5m on smooth concrete surface (from different starting positions) <u>Packaging Stability</u> Firing pin test acc. to EN 403:2004 <u>Flame resistance</u> The unit does not contain easily flammable parts. At 800 ± 50°C the device is pulled through an open flame at 6 ± 0.5 cm/sec. – when removed from the flame, the device stops burning (self-extinguishing). <u>Temperature changing resistance</u> Performing in the listed order: (70 ± 3) °C, rel. humidity < 20 %, (72 ± 3) h (70 ± 3) °C, rel. humidity ≥ 95 %, (72 ± 3) h (-30 ± 3) °C, (24 ± 1) h <u>Pressure changing</u> 2 compressed air cycles with (-400 ± 10) mbar for 60 sec pressure compensation after < 20 sec. 3000 compressed air cycles with (-300 ± 10) mbar for 60 sec. pressure compensation after < 10 sec.																														
3.2	Particle filtration efficiency (according to EN 143:2007 (P2))	Test Aerosols: minimum efficiency at a flow of 95 L/min	sodium chloride, paraffin oil 94 % NaCl, 94 % paraffin oil																													
3.3	Gas filtration capacity	Test conditions (EN 403:2004): 20x1,5 L sinus, 90 % rel. humidity, 25°C (CO) 30 L/min, 70 % rel. humidity, 20°C (Acrolein,HCl, HCN) <table><tr><th>Test Gas</th><th>Concentration / ppm</th><th>Breakthrough / ppm</th><th>Minimum break-through time / min</th></tr><tr><td>CO</td><td>2,500 ¹⁾</td><td>200 ²⁾</td><td>15</td></tr><tr><td>Acrolein</td><td>100</td><td>0.5</td><td>15</td></tr><tr><td>HCl</td><td>1,000</td><td>5</td><td>15</td></tr><tr><td>HCN</td><td>400</td><td>10</td><td>15</td></tr></table> ¹⁾ Additional tests with 5,000, 7,500 and 10,000 ppm ²⁾ temporal weighted arithmetic mean during every 5 minutes Test conditions (according to DIN 58647-7:1997): 30 L/min, 70% rel. humidity, 20°C <table><tr><th>Test Gas</th><th>Concentration / ppm</th><th>Breakthrough / ppm</th><th>Minimum breakthrough time / min</th></tr><tr><td>H₂S</td><td>2,500</td><td>10</td><td>15</td></tr></table>			Test Gas	Concentration / ppm	Breakthrough / ppm	Minimum break-through time / min	CO	2,500 ¹⁾	200 ²⁾	15	Acrolein	100	0.5	15	HCl	1,000	5	15	HCN	400	10	15	Test Gas	Concentration / ppm	Breakthrough / ppm	Minimum breakthrough time / min	H ₂ S	2,500	10	15

Dräger PARAT 5500 Fire Escape Hood

5.0 Packing & Packaging

5.1 Package:

dimension (HxLxW) / mm	weight (approx.) / g	part name	material (main components)
90x190x135	590	PARAT 5510, Single Pack	cardboard packaging
105x215x155	660	PARAT 5520, Soft Pack	Polyester/ polyurethane cellulose propionate, poly- ethylene
107x241x143	720	PARAT 5530, Hard Case	Acrylester-styrol-acrylnitrile, polycarbonate

5.2 Packaged
units

One hood each

6.0	Accessories and Training	For carrying and fixing the PARAT Escape Hoods, Dräger offers various possibilities:
		<u>Soft Pack:</u>
		Waist Belt, Shoulder Strap, Belt Clip, Grip Clip
		<u>Hard Case:</u>
		Waist Belt, Shoulder Belt, Belt Clip, Grip Clip, D-Ring, Wallholder
		<u>Training hoods:</u>
		To enable a fast donning of the hoods in case of an emergency, training hoods are available. The hoods have a filter dummy and were offered in the different packagings.
		<u>Videos:</u>
		There is a video for every kind of packaging, which shows the donning as well as the filter replacement step by step.

Technical Data Sheet

Dräger PARAT 5500 Fire Escape Hood

7.0 User notes and limitations

The performance of the filter is according to EN 403. The oxygen content of the ambient air must be at least 17 Vol.-% to 19.5 Vol.-%. Observe the respective national regulations.

The storage temperature must be between -20°C and +55°C.

The devices conform to the minimum requirements of the standard indicated by the class and type of the filter it is marked with. It must be noted that laboratory values can differ from those measured in practice. This may result in longer or shorter break through times. The user must read and understand the instructions for use. Additionally the knowledge of all relevant application rules is mandatory (see in particular the limitations in use). Further information on request.
